

## Updating Garmin GPS Units

It is important to have the most recent software on your GPS device. Garmin has an easy way to update the software on the GPS.

First, go to <http://www8.garmin.com/support/collection.jsp?product=010-00256-0>.

You need to download the WebUpdater. After downloading WebUpdater, connect your Garmin GPS to your computer, run WebUpdater, and follow the screen prompts. You will need internet access in order to complete this process. Turn your GPS unit on for the updating process.

The updates will ERASE all data on the GPS unit. Before updating, save all tracks and waypoints to your computer.

The updating speed depends upon your internet connection.

The WebUpdater only has to be downloaded once. It will automatically update itself and the GPS software.

After updating the GPS unit, take it outside and turn it on. Allow the GPS unit to lock onto satellites before turning it off.

The update process is complete!
